

Exhibits F-1 through F-4

Housing Assistance Summary Data

These exhibits summarize, in different ways, the detail of data reported in Exhibits E1-E14. Exhibit F-1 consists of three parts. The first part (pages 1-54) identifies activities by each agency. The next part (pages 55-63) reports housing assistance activity by county. The last part (pages 64-67) summarizes housing assistance activities according to whether provided by an agency or non-agency entities or persons and whether assistance was provided to an elderly or non-elderly household. Exhibit F-2 categorizes activities according to whether completed inside or outside a project area and also reports whether an agency or non-agency was responsible for the activities. Exhibit F-3 sorts activities according to whether it qualifies towards meeting the inclusionary or replacement requirement and by source of funds. Exhibit F-4 summarizes activities according to whether assistance was funded from the Low-Mod Fund or agencies' other funds.

Comparing this reporting year's Exhibit F-1 total "county" data (beginning on page 64) against the previous year (respectively 22,549 versus 19,422 households) shows agencies reported an overall increase in assistance among activities. The increase was especially apparent for New Construction (8,877 this year compared to 6,923 last year). There was a slight increase in activities assisting Mobilehome Park Owners and Mobilehome Owner Residents (1,446 versus 1,180), as well as Non-substantial Rehabilitation (3,793 as opposed to 3,555), and slight decrease in Acquisition of Covenants (478 compared to 661). Exhibit F-1 data (Page 67) also reflects that most assistance was provided to non-elderly households (67% representing 15,011 households) versus elderly households (33% representing 7,538 households), which did not substantially change from what was reported last year (36% Elderly and 64% Non-elderly).

Exhibit F-2 summarizes housing assistance based on whether it was provided inside or outside of project areas. This year, agencies provided slightly less assistance inside project areas (43% or 9,610 households) versus outside project areas (57% or 12,939 households). Last year, similar percentages were reported (inside activity was 49% whereas outside activity was 51%).

Exhibit F-3 reflects agencies reporting assistance as either the agency assisting households (4,815) or non-agency entities or persons providing assistance (17,734). This year agency assistance amounts to 21 percent of all activities whereas non-agency assistance reflects 79 percent. Last year, the respective differences were 22 and 78 percent.

Exhibit F-4 shows that of 22,549 total households assisted, the Low-Mod Fund was used to assist 19,405 households (86 percent). Agencies used other funds (non Low-Mod Funds) to assist the other 3,144 (14%) households. Last year, agencies reported using the Low-Mod Fund to assist 86 percent of total (19,422) households.
